

Module 3: Academic Engagement

Though teachers often create fun and engaging lessons, it can still be difficult to know whether or not students grasp the concepts that are taught. A quick formative assessment is a simple way to see if students really do understand the lesson.

ClasStars makes it simple and easy to collect academic engagement data. Whether an assessment is made up of just a few questions, or is more comprehensive, by simply swiping left, teachers can record student responses to academic engagement, and with comprehensive dashboards and charts better track how well their students understand the subject.
